

Molecular Cell Biology

© 1986 by W. H. Freeman and Company

Contents

Section 1: Chemical and Molecular Foundations

1. Life Begins with Cells
2. Chemical Foundations
3. Protein structure and Function
4. Basic Molecular Genetic Mechanisms

Section 2: Cell Organization and Biochemistry

5. Biomembranes and Cell Architecture
6. Integrating Cells into Tissues
7. Transport of Ions and Small Molecules Across Cell Membranes
8. Cellular Energetics

Section 3: Genetics and Molecular Biology

9. Molecular Genetic Techniques and Genomics
10. Molecular Structure of Genes and Chromosomes
11. Transcriptional Control of Gene Expression
12. Post-transcriptional Gene Control and Nuclear Transport

Section 4: Cell Signaling

13. Signaling at the Cell Surface
14. Signaling Pathways That Control Gene Activity
15. Integration of Signals and Gene Controls

Section 5:

16. Moving Proteins into Membranes and Organelles
17. Vesicular Traffic, Secretion, and Endocytosis
18. Metabolism and Movement Lipids

Section 6: Sytoskeleton

19. Microfilaments and Intermediate Filaments
20. Microtubules

Section 7: Cell-Cycle and Cell-Growth Control

21. Regulating the Eukaryotic Cell Cycle
22. Cell Birth, Lineage, and Death
23. Cancer
